PROFESSIONAL EXPERIENCE

AI Evaluation Engineer (Independent Contractor) | Handshake AI **Nov 2026 – Present**

- Authored containerized agentic benchmark tasks in Docker, each with a reference solution and automated verifier, to test how frontier LLM agents handle multi-step work.
- Formulated domain-specific prompts, then evaluate, grade, and revise model responses and annotate evaluation data to improve large language model training.

AI Systems Analyst (LLM and Agent Engineering) | Flypower **Mar 2026 – Nov 2026**

- Streamlined LLM-orchestrated agentic workflows with both founders of a 6-person team, adding a RAG pipeline that grounds drafts in cited sources and contributing to 10+ client siting due diligence reports for renewable energy and data center developers.
- Led development of reusable agent skills across 3 platforms (Claude Code, Codex, Perplexity) for social media intelligence, community sentiment analysis, stakeholder profiling, and extraction from government portals, meeting records, and audio.
- Built custom MCP (Model Context Protocol) servers and integrated existing ones, connecting Claude Code and Codex agents to Jira, Confluence, Slack, AWS, GitHub, Google Drive, and Granola meeting transcripts.
- Centralized skills scattered across tools and Google Drive into one GitHub registry, automated by 6 GitHub Actions workflows: format validation, duplicate detection, sample-input tests, an auto-generated catalog, versioned releases with a changelog, and team alerts.
- Designed evaluation and review workflows that validate AI outputs against 4 criteria (accuracy, source credibility, geographic relevance, client usefulness) and diagnosed recurring model and workflow failure modes to drive product fixes.
- Devised an evidence ontology and prototype knowledge graph in Neo4j and Memgraph to map source evidence to report findings and created a prototype analyst workspace unifying multiple LLMs and the skill library.

Technical Business Analyst, ServiceNow | LTIMindtree **Sep 2022 – Jun 2024**

- Accelerated monthly close and portfolio reporting by 40% by partnering with Finance and 3+ teams to convert business requirements into SQL reporting logic and standardized KPI definitions, creating one agreed source for cost, occupancy, and performance data.
- Consolidated ServiceNow and AWS datasets into one Snowflake warehouse by migrating enterprise reporting pipelines, cutting query latency by 30% and enabling self-serve analytics across 3+ business units.
- Eliminated recurring mismatches between reports and source systems by reconciling 1TB+ of enterprise data, validating KPI calculations, and implementing reusable SQL-based quality and variance checks upstream of BI reports.
- Reduced operational turnaround time by 25% by building Power BI dashboards on ServiceNow and pipeline data that surface workflow bottlenecks, processing delays, and SLA risks, so support teams pinpoint failing jobs without escalating to the data team.
- Engineered ETL pipelines moving multi-format customer and incident data (JSON/CSV) from ServiceNow into AWS S3 and Redshift, reducing data availability latency by 40% for downstream analytics.

TECHNICAL SKILLS

AI and LLM Engineering: Agentic workflows, multi-agent systems, MCP, RAG, LLM evaluation (evals), prompt and context engineering, agent skills (Claude Code, Codex, Perplexity), LangGraph, LangChain, LlamaIndex, Hugging Face, Ollama
Programming and Databases: Python (Pandas, scikit-learn, PyTorch, XGBoost), SQL (CTEs, Window Functions)
Business Intelligence & Reporting: Power BI (DAX), Tableau, MS Excel (Power Query, Pivot Tables, VLOOKUP, VBA), Looker Studio, KPI Reporting, Data Storytelling, Stakeholder Communication, Cross-Functional Collaboration, Documentation
Data and Analytics Engineering: Snowflake, BigQuery, Redshift, PostgreSQL, DuckDB, Airflow, REST APIs, ETL/ELT, data modeling, Data reconciliation, vector databases (Qdrant, Pinecone, FAISS), graph databases (Neo4j, Memgraph)
Cloud and DevOps: AWS (Bedrock, SageMaker, S3, EC2), GCP, Docker, GitHub Actions, CI/CD, Git

PROJECTS

Evidentia: Multimodal Multi-Agent Research Analyst | *LangGraph, FastAPI, Qdrant, PostgreSQL, Docker, Llama 3.* Launched a multi-agent research analyst that automates evidence-backed insight generation, cutting manual synthesis time by 60%.

Tele-Compass: Telehealth Policy Intelligence Platform | *RAG, Ollama, Mistral 7B, vector database.* Developed a RAG platform for cited natural-language Q&A and multi-state policy comparison, with sub-5-second responses across 100+ documents.

Lumina: U.S. Grid Intelligence and Demand Forecasting | *Python, SQL, BigQuery, Looker Studio.* Constructed a star-schema warehouse processing 400K+ hourly energy demand records across 10 U.S. balancing authorities, with a forecasting dashboard.

U.S. Food Affordability, Inflation & Supply Chain Forecasting Platform (USDA & Kroger Data) | *SQL, dbt, BigQuery, Power BI, Prophet.* Architected a real-time BI and forecasting platform analyzing 50K+ US grocery prices, uncovering a 2.5× affordability gap affecting 13.6M food-desert residents, and delivering high-accuracy 6-month CPI forecasts (MAPE: 0.28%) projecting +1.9% inflation growth.

EDUCATION AND CERTIFICATIONS

The George Washington University | Washington, DC **May 2026**
Master of Science, Data Science | GPA 3.93 | Global Leaders Fellowship recipient | **Certification:** AWS Certified AI Practitioner
